TenCate opens TenCate Geosynthetics plant in the Chinese city of Zhuhai

On Friday 13 June, chairman L. de Vries will be opening the new TenCate Geosynthetics plant in the presence of the mayor of Zhuhai in the industrial zone of Zhuhai, a city located in the Guangdong province of China. With the production of innovative geosynthetic materials, TenCate will be focusing on the growing Asian markets in China and India. The plant has about 150 employees.

TenCate's new production location is situated in the bustling heart of China's economic centre in the industrial zone of the city of Zhuhai, near Hong Kong, where 1.5 million people live and work. The plant enables TenCate to meet the considerable demand for geosynthetic materials in various Asian countries.

The plant is equipped with machines that produce materials for, in particular, TenCate Geosynthetics. It has over 100 weaving machines for so-called woven and non-woven materials. In addition, four extrusion lines have been installed. The rest of the production focuses on materials for TenCate Industrial Fabrics.

The new plant is very spacious. The entire site covers an area of 135,000 m², of which only 28,500 m² has currently been built on. In only 9 months of construction, a company hotel was built, which provides accommodation for a large number of employees who will stay on site for longer periods at a time due to long travel distances to work. A large company restaurant is also available for use. The plant has about 150 employees.

The opening ceremony will be performed by Mr L. de Vries, CEO of Royal TenCate, and will be graced by the presence of the mayor of Zhuhai. The ceremony will also be attended by members of the Board of Directors, the Supervisory Board and the group directors involved.

Note for the editors (not for publication):

At this moment, there are only low-resolution images of the TenCate plant available. However, high-resolution images will be available after the opening. Please email requests to: media@tencate.com
