

Monoslide™ Pro with XQ™ technology

Sports turf

STAYS IN SHAPE NO MATTER WHAT SHAPE IT'S IN.

Engineers are designing exciting new monofilament turf blade shapes to enhance both playability and aesthetic appeal. But these innovative new shapes have had one significant drawback: greater susceptibility to wear and tear. Until now.

The field to play on. And on. And on. And...

Monoslide™ Pro with XQ™ technology offers designers unprecedented freedom. It is made in a way that lets you twist, turn, fold, bend, curve, or zig-zag it without sacrificing durability. If you can dream it up, this turf can take it.

And it's not only durable, but resilient too. The vertical spine allows the blades to return to a standing position after trampling. The XQ™ technology helps it retain its shape when subjected to excessive play. It's also excellent at resisting matting.

So, now, you can create long-lasting fields of exceptional playability. Footing is sure. Ball roll, consistent. It's even sliding friendly. Players love it. Good thing, because they'll be playing on it a long, long time.

XQ Technology. The key to durable monofilaments.

XQ™ technology is a breakthrough in polymer processing that gets rid of weak points for unprecedented split resistance. So there's no need to ever resort to thicker blades. That means you can design a lush, more natural- looking field.

And, only TenCate has this technology. So only TenCate can produce turf blades this durable. Maybe that's why we're the only ones to offer a FIFA five- year warranty – available through additional purchase.

TenCate: technological innovation, sensible solutions.

TenCate has decades of industry-leading turf fiber innovation and offers any kind of turf you could ever possibly need. From our Monoslide™ fibers that provide great playability and durability for the budget minded. To our XQ™ technology that produces incredibly resilient monofilament fibers. To XP Blade™, a true breakthrough in durability of multi-use and high-use fields. If it's turf you need, TenCate has got it. And we always exceed expectations.

materials that make a difference

Monoslide™ Pro with XQ™ technology

- Material type** : Polyethylene (PE)
- Shape** : 
- Blade type** : Monofilament
- Denier / ply** : 10,800 / 6
- Filament thickness** : 310 (core) / 130 (base) µm
- Filament width** : 1,45 mm
- UV Protection** : Fiber embedded

TenCate turf products are made without adding any heavy metals and conform to the ASTM F 2765-09 and LAGA standards for heavy metal content and DIN 18035-7 for leaching of heavy metals.
