

Thiolon XP Golf™

Xtended Play™ fiber

Product Information

Thiolon XP Golf™ - the proven choice for synthetic golf greens.

Whether amateur or pro, today's golfers dedicate a substantial amount of their leisure time to the improvement of short game skills. Not surprisingly, the interest in personal synthetic golf greens continues to spread as more individuals discover the convenience of practicing in one's own backyard. Putting, pitching, chipping, and even bunker play can now all be realistically recreated with a professionally installed, sand filled putting surface featuring the Thiolon XP Golf grass fiber.

Engineered Performance

Developed specifically to mimic the play of a natural bent grass green, Thiolon XP Golf provides the most authentic golf surface available on the market today. The thin, wide Polypropylene (PP) fiber allows for near perfect ball roll across the exposed edge and a soft texture that holds a shot from any distance. In fact, Thiolon XP Golf responds so much like the real thing that most installers can control the speed of the putting surface to match the owner's exact specification. No other synthetic grass fiber offers this level of flexibility and precision.

Xtended Play Difference

Developed with TenCate's exclusive Xtended Play™ fiber technology, Thiolon XP Golf offers the same durability, soft hand, and split resistance built into all Thiolon premium XP sports fibers. What does this mean for the customer? Synthetic golf greens constructed with Thiolon XP Golf will look and play like new longer, while requiring less brushing and maintenance over the entire life of the surface.

Proven Choice

With over 10 years and millions of square feet to its credit, Thiolon XP Golf stands alone as the undisputed fiber of choice for synthetic golf greens. Many top professional golfers, A-list entertainers, major corporations, and brand-name hotel/resorts have chosen to install systems featuring Thiolon XP Golf due to the superior product performance and outstanding quality of play.

Innovative Leader

As the world's largest manufacturer of synthetic grass fiber, TenCate invests heavily in the research and development of new technologies and fiber designs. Our goal is to continuously improve the performance of our products and contribute significantly to the overall progress of the industry in which we work. Using our deep knowledge of materials and production methods, combined with a resourceful and hands-on approach, we strive to develop synthetic grass fibers that make a tangible difference in our customers' everyday lives.

Thiolon XP Golf Technical Specs
Basic polymer: Polypropylene (PP)
Manifestation: Parallel/long slit
Overall denier: 7,600
Fiber thickness: 52 micron
Fiber width: 11.8 mm
Tensile strength: 169 N
Elongation at break: 15%
