

STAYS AROUND WHEN OTHER TURFS SPLIT.

PERFORMANCE

Splitting is sports turf yarns' greatest enemy. It's the main reason they wear out. With the notable exception of TenCate XP Blade™.

Six years and 3500 fields worth of proof.

It's one thing to claim durability. It's another to offer real-world proof. And every one of those fields - even the oldest - is still in use today.

What makes it possible is a proprietary manufacturing process – developed exclusively by TenCate – that prevents splitting. So XP Blade™ lasts longer than any other tape or monofilament yarns.

It twists when played on rather than lying flat so it retains its evenness and natural ball roll. You get better tuft bind – the yarn is so well rooted into the system that blades are not lost. And XP Blade™ holds infill in place better than monofilament yarns, reducing infill splash, bumps, and potholes. When you add it all up, you get a field that looks and plays like new for a long, long time.

You'd expect a warranty. But you'd never expect this one.

No one else comes close to our new XP Blade 5-Year Durability Warranty available through an additional purchase. The industry's first to guarantee for five years of unlimited play against excessive fiber splitting which leads to matting, dusting and fiber loss and an early end to a field's life. What's more, it's based on the original value of the field. When we make claims, we back them up.

TenCate: technological innovation, sensible solutions.

TenCate has decades of industry-leading turf fiber innovation and offers any kind of turf you could ever possibly need. From our Monoslide™ fibers that provide great playability and durability for the budget minded. To our XQ™ technology that produces incredibly resilient monofilament fibers. To XP Blade™, a true breakthrough in durability of multi-use and high-use fields. If it's turf you need, TenCate has got it. And we always exceed expectations.

DURABILITY

ONLY TENCATE XP BLADE™ LOOKS THIS GOOD AFTER LISPORT WEAR SIMULATION OF 40,000 CYCLES.

TENCATE™
 materials that make a difference

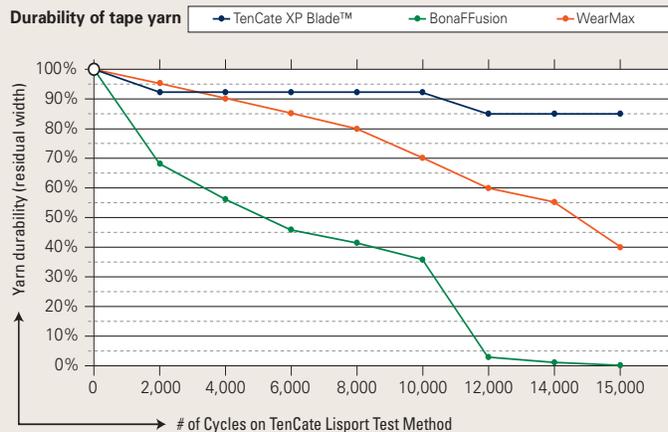

TENCATE XP Blade™

Material type : Polyethylene (PE)
Blade type : Non post-fibrillation tape
Denier / ply : 5,000/1; 8,000/1
Fibrillation : Parallel long slit
Filament thickness : 100 µm thick, non-abrasive
UV Protection : Fiber embedded

**IN A SIDE-BY-SIDE COMPARISON,
THERE'S REALLY NO COMPARISON.**

TENCATE BENCHMARK LISPORT WEAR SIMULATION

# of cycles	TenCate XP Blade™	BonaFFusion™	WearMax™
0	100%	100%	100%
2,000	92.3%	68.7%	95.0%
4,000	92.3%	55.6%	90.0%
6,000	92.3%	45.6%	85.0%
8,000	92.3%	41.0%	80.0%
10,000	92.3%	36.8%	70.0%
12,000	85.0%	3.0%	60.0%
14,000	85.0%	1.0%	55.0%
15,000	85.0%	0.0%	40.0%

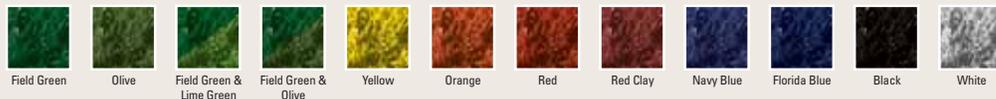

Because TenCate's Lisport wear test is considerably more severe than regular Lisport tests our test numbers should not be compared directly to regular Lisport test data. Our test breaks the product down much faster so far less test cycles are needed to provide objective test results.

Additionally, TenCate's quantitative method to measure wear enables objective relative comparison of wear resistance and product performance.

There is no guesswork.

TenCate turf products are made without adding any heavy metals and conform to the ASTM F 2765-09 and LAGA standards for heavy metal content and DIN 18035-7 for leaching of heavy metals.
