

TenCate Monoslide™ Classic

Superior resilience

Product Information

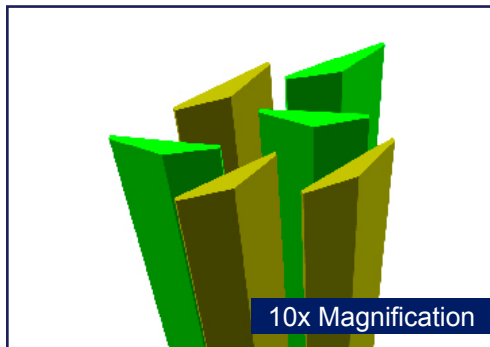

TenCate Monoslide™ Classic: performance has a new shape.

Natural look is one challenge, incorporating pile recovery and thus surface retention for years is quite another! Pile recovery is absolutely necessary for optimal playing conditions.

TenCate Monoslide™ Classic combines the latest in advanced polymer technology with a shaped fiber design to set a new standard in monofilament fiber performance. With its softer hand, superior resiliency, and more natural appearance, TenCate Monoslide™ Classic offers owners the most consistent play and resistance to wear of any premium monofilament fiber available today.

Engineered shape

Like a natural blade of grass, the cross-sectional shape of a monofilament fiber plays an important role in determining the overall strength and resilience of the product. TenCate engineers applied this critical design principle to the development of TenCate Monoslide™ Classic and its unique triangular shape. As a result, each filament has a carefully determined balance of flexibility and thickness, resulting in a shape “memory” that stands up better and bounces back faster after periods of intense use.

Duotone

In addition to a standard Field Green, TenCate Monoslide™ Classic is also available in a Duotone configuration (3x3) of Field Green and Olive Green as well as Field Green and Lime Green. This subtle contrast of green shades results in a visually pleasing blend of lights and darks that more closely resembles the varied appearance of natural grass.

Enhanced comfort

TenCate Monoslide™ Classic sets a new standard in player comfort and safety with a dramatically softer hand than previous fiber technologies. Whether performing slide tackles during a game or speed drills on the practice field, athletes on a TenCate Monoslide™ Classic surface will be better protected against the risk of skin abrasion injuries.

Benefits

- Shaped monofilament fiber
- Superior resilience
- Natural appearance
- Softer hand
- Excellent durability

TenCate Monoslide™ Classic Technical specs

Basic polymer: Polyethylene (PE)

Shape: triangular

Overall denier: 10,800

Number of filaments: 6

Denier per filament: 1,800

Fiber Thickness: 260 micron

Fiber width: 1.3 mm
