

## STAYS IN SHAPE NO MATTER WHAT SHAPE IT'S IN.

Engineers are designing new monofilament fiber turf blade shapes to enhance both playability and aesthetic appeal. But these innovative new shapes have had one significant drawback: greater susceptibility to wear and tear. Until now.

### XQ Technology. For durable monofilaments.

XQ technology is a breakthrough in polymer processing. It gets rid of weak points to produce unprecedented split resistance. So you can twist, turn, fold, bend, curve, or zigzag Monoslide with XQ technology without sacrificing durability.

And, because XQ makes monofilament so split-resistant, there's no need to resort to thicker blades. So you get a lusher, more natural-looking field.

But remember, XQ technology is proprietary. Only TenCate has it. So only TenCate can produce turf blades this durable. (Maybe that's why we're the only ones to offer a FIFA five-year warranty—available through additional purchase.)

### Resilient. So it looks great and plays even better.

The durability is impressive. The resilience is downright remarkable. Monoslide with XQ technology is already proven exceptionally resilient even in traditional rectangular shapes. Imagine how well it will perform when applied to more innovative designs.

These characteristics mean great playability. Footing is sure, ball roll consistent. It's even sliding friendly. Players love it. Good thing, because with this resilience and durability, they'll be playing on it a long time!

### Part of TenCate's new family of cutting-edge products.

TenCate has decades of unparalleled turf fiber innovation. And, now, we've created three new products that are the pinnacle of that innovation. XP Blade turf tape for maximum durability of multi-use and high-use fields. XK advanced synthetic turf backing. And Monoslide with XQ technology—the new standard in monofilament—for maximum resilience and performance. Whichever you choose, you'll find TenCate always Xceeds Xpectations.

PERFORMANCE

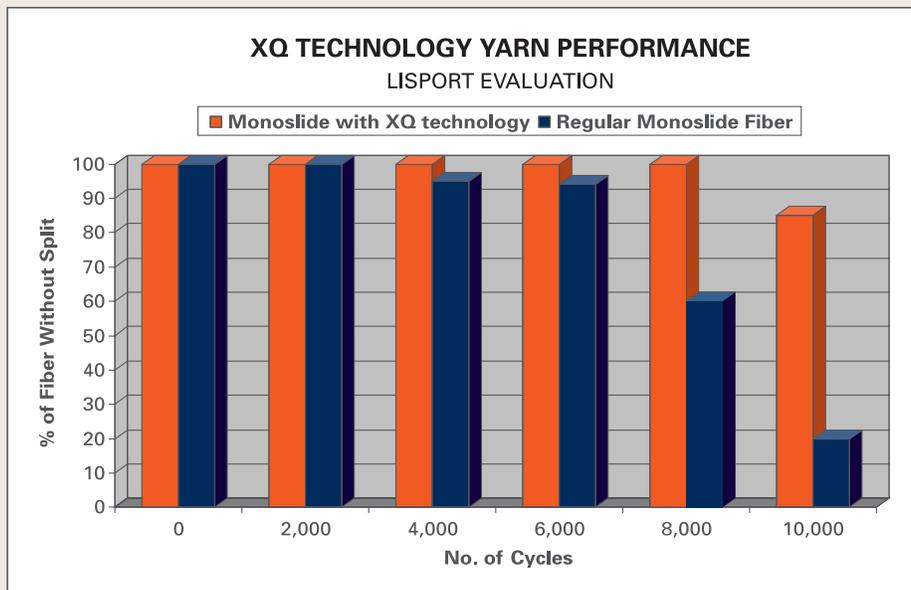

RESILIENCE

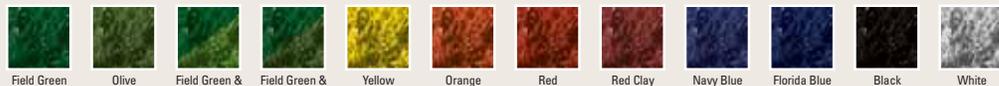

# Monoslide™ with XQ™ technology

**Material type** : Polyethylene (PE)  
**Shape** :   
**Blade type** : Spinneret extruded monofilament  
**Denier / ply** : 10,800 / 6  
**Filament thickness** : 310 (core) / 130 (base) µm  
**Filament width** : 1,45 mm

TenCate turf products are made without adding any heavy metals and conform to the ASTM F 2765-09 standard for heavy metal content and DIN 18035-7 for leaching of heavy metals.
