### **TenCate Geosynthetics introduces TenCate MiraSlope® design solutions software for Mechanically Stabilized Earth applications**

**TenCate Geosynthetics introduces TenCate MiraSlope® design solutions software for Mechanically Stabilized Earth (MSE) applications. This easy to use software program of TenCate will assist engineers in determining the reinforcement requirements for reinforced soil slopes and walls.**

TenCate MiraSlope® design solutions software is based on state of the practice design methods and can determine the optimal reinforcement configuration for simple geometries using its interactive approach. The designer or engineer may select the appropriate TenCate reinforcement geosynthetic and facing system to use in their design, and analyze the potential failure modes for the design cross section. The design standards that TenCate MiraSlope® can utilize in North America are FHWA and BS8006-95, in Europe, EBGeo 2010 based on EC7 and BS8006-95 and in Asia, FHWA and BS8006-95.

**TenCate Geosynthetics  
Almelo, the Netherlands, Thursday 1 March 2012**

**TenCate Geosynthetics** develops solutions and systems for transportation infrastructure, water management & cleaning, and environmental applications, delivered through synthetic woven, nonwoven, and knitted products. TenCate Geosynthetics has factories in North America, Europe and Asia.

**Royal Ten Cate** (TenCate) is a multinational company which combines textile technology with related chemical processes and material technology in the development and production of functional materials with distinctive characteristics. Products of TenCate are sold worldwide.

Systems and materials from TenCate come under four areas of application: safety & protection, space & aerospace, infrastructure & the environment, and sport & recreation. TenCate occupies leading positions in protective fabrics, composites for space and aerospace, antiballistics, geosynthetics and synthetic turf. TenCate is listed on the NYSE Euronext (AMX).
