

# Filtration Fabrics

## OUR COMPANY

TenCate™ develops and produces materials to increase performance, reduce costs and deliver measurable results by working with our customers to provide advanced solutions.

As the industry's leading producer of woven monofilament, TenCate™ is an experienced weaver of innovative industrial fabrics and stands committed to offering full-service expertise in the filtration market.

By working directly with industry experts, TenCate™ develops fabrics with the quality and functionality to meet your needs. Through our unique vertical production process, TenCate™ insures the quality of all our fabrics and is continually developing new fabrics. This process has established our experienced technical team as the best in the woven filtration fabric industry.

## OUR PROCESS

Capable of weaving and finishing a wide variety of patterns and constructions, TenCate's state of the art manufacturing facilities have the capacity to achieve the results your company needs. In addition, our ISO certified facilities give us the versatility to customize each fabric weave.

For example, TenCate™ can provide twill weaves for high particle retention or satin weaves for good cake release. For higher flow rates, TenCate™ produces industrial fabrics from monofilament or multifilament yarns to decrease the flow rate as needed. We also develop unique three-dimensional weaves that offer maximum air flow and strong holding capacity.

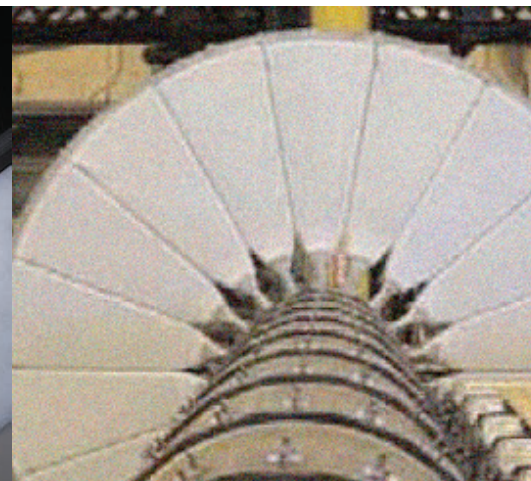

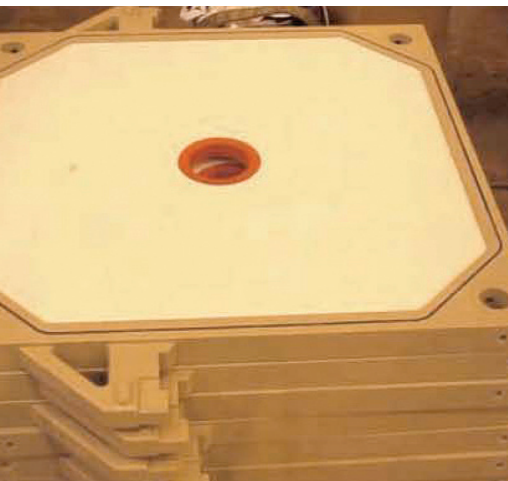

The Difference TenCate™ Filtration Fabrics Make:

- Finishing versatility within a broad range of permeability ratings.
- Offering customization through a wide range woven widths, slit widths, roll lengths and CFMs.

- Certifiable in-house testing of physical properties including air flow, water flow, tensile strength, puncture resistance, burst strength and many additional attributes.
- Our own ISO certified production facilities.

TenCate™ actively listens to customers in order to create solutions to issues that affect you and your business. We make products that bring about change. From extrusion to finishing and on to final inspection, TenCate's filtration products make a difference.

# Filtration Fabrics

Style	Description	CFM	Finish	Color	Width	Length	Stock
58200	33 x 31, Honeycomb	>1300	Heat set	White	64	300	MTO
