

TenCate Geosynthetics CCR Technical Presentation

The focus of this presentation will be on the use of geosynthetics for CCR applications. TenCate Geosynthetics products and engineering design assistance have been used extensively on various sludge pond applications, including high strength geosynthetics used to gain construction access in pond capping applications and geosynthetic tubes used in dewatering applications.

AGENDA

- History of TenCate – Mirafi®
- Types of geosynthetics - woven, non-woven, geogrids
- Applications of geosynthetics - filtration, slopes, roadway stabilization, pond capping & dewatering
- Mirafi® Pond Capping Series - Innovative high strength woven geotextile for pond capping applications
- Mirafi® Water & Environment – dewatering applications
- Design Assistance
- Case Studies

TenCate is a 300+ year old company and the global leader in geosynthetics. We develop and produce materials that increase performance, reduce costs and enable people to achieve what was once unachievable. Our goal is to contribute significantly to progress in the industries in which we work.
