Trumbull®

TRUPAVE® ENGINEERED PAVING MAT
TRUE PERFORMANCE. TRUE PROTECTION.

PROJECT NAME:

The Willows

LOCATION:

Frontenac, MO, St. Louis County

AUTHORIZED DEALER:

Missouri Petroleum

INSTALLED BY:

Missouri Petroleum

PAVING CONTRACTOR:

NB West Contracting

AREA INSTALLED:

4,200 sq. yds.

EXISTING PAVEMENT TYPE:

Concrete

INSTALLATION DATE:

May 2004

TRUPAVE® ENGINEERED PAVING PROJECT PROFILE

The Willows is a gated community with existing concrete slabs. Repair work had been done to the curbs and concrete surface in preparation for the overlay consisting of a 2" commercial grade asphalt mix. *TruPave* engineered paving mat was installed directly over the existing concrete surface. *TruPave* engineered paving mat is specifically designed for this type of application. *TruPave* engineered paving mat will be evaluated in retarding the reflective cracking that is most commonly observed in this type of overlay treatment.

The contractor utilized a 10' wide paving machine that was at times, somewhat cumbersome to maneuver in the tight parking areas within the community. No serious tearing was noted on the *TruPave* engineered paving mat during paving operations. This project also had approximately 5,700 sy of polypropylene fabric installed in order for the homeowners association to evaluate the performance of both Owens Corning's *TruPave* engineered paving mat versus polypropylene.
