

## Application Story

PROJECT | TENCATE PROTECT, THE NETHERLANDS  
Product | Geotube® Dewatering Technology  
Application | Light Industrial

Location

The Netherlands

### The Challenge:

A textile manufacturing site needed a more economical method of handling their textile processing waste [photo 1].

### The Solution:

Geotube® MDS dewatering technology offered the perfect solution for this situation [photos 2-3]. The Mobile Dewatering System allowed on-site dewatering and eliminated the need to haul away three truckloads of wastewater per week.

A single Geotube® MDS dewatering container was deployed on site. The pumping, dosing, and mixing systems were contained in a single system management unit for convenience and efficiency [photo 4]. The watertight roll-off MDS container was equipped with a single drain outlet [photo 5].

### The Results:

By employing the on-site Geotube® dewatering unit, TenCate™ Protect reduced its disposal costs by 58.6%. The company saved more than \$35,000 annually.
