FC Oss opts for Edel Grass Green Future football turf pitch

*Deventer, 3 June - FC Oss will switch over to football turf next season. At the end of May the club signed an agreement for the construction of an Edel Grass Green Future 2.0 football turf system that meets FIFA** quality requirements. This means that as of next season FC Oss will have a sustainable, woven football turf system that guarantees outstanding playing characteristics. Construction work has already begun this week; by mid-July the pitch must be ready for play.*

This Dutch first division club has opted for the innovative, woven Edel Grass Green Future 2.0 football turf system. This latest generation of football turf, which has also recently been installed at the premier league clubs Heracles Almelo and PEC Zwolle, is characterized by optimum playing characteristics and ball behaviour and provides the perfect football experience.

Recyclable

The materials in the 'Green Future System' have been carefully selected and consist of sustainable TenCate components, thus making the system fully recyclable.

As the main contractor, Oranjewoud is involved in the construction of this state-of-the art football turf pitch. The design partners in the 'Green Future System' are Ten Cate Grass (Technology Partner), Edel Grass (FIFA Preferred Producer of the football turf system) and J&E Sports (installation and maintenance of the football turf system).
